

Using Triangle Flashcards

Three corner flashcards help students

- Develop number sense
- Recognize patterns
- Build fact strategies
- Boost problem solving skills
- Relate division to multiplication

Use three corner flashcards to practice multiplication and division combinations.

- For multiplication, you cover the top number (largest of the three numbers) and multiply the bottom two corners or numbers. The answer is the top numeral.
- For division, you cover one of the bottom corners. Divide the top number by the bottom number that still shows. The covered numeral is the answer.

Cut out the triangle flashcards and mount on tagboard. These cards are excellent for home practice.
