BEE ISSUE IN QUEST PORTABLE

Due to several students being bitten by bees that have burrowed into an outside wall in the Quest portable at Mead, a licensed professional pest control operator came after school today to apply the product Apicide in the Quest portable area only. Given the need to protect our students' safety from continuing to be bitten by the wasps from this nest, this action was taken immediately. Warning notices about this application process are posted on the front doors of the school and the Main Office doors as well.
